O2Protcol

WHITE PAPER

Introduction

Helping investor and creator to get the highest returns, with the lowest risk, requiring the minimum effort, in an easy to use suite with intuitive reporting,connect the creator with the investor defines the heart of our mission, through NFTs and Cryptocurrency.

Harnessing the unique capabilities inherent to cryptocurrency, we are able to bundle numerous additional financial and security benefits with this service, all while making it low friction and easily accessible to the masses. This is the Dream, O2Protocol is the answer.

Investing in cryptocurrency and NFTs doesn't have to be confusing and time consuming. Our system help the user automating the process of getting reward through the staking of our cryptocurrencie, rewarding the user with NFTs, keeping they O2 token. All of that will be managed through the team, that have years of experience,and also with automated system.

Those system as we said reward the investor but also the Creator, they will get Royalties from sales, and that ensures a win-win relationship between creator and Investor.

History

The relatively recent emergence of cryptocurrency and NFTs has given birth to a worldwide financial paradigm shift closing in on a trillion-dollar market cap. O2Protocol was formed to put the benefits of cryptocurrency and NFTs investing within the reach of everybody. Innovative products in the cryptocurrency space have been nearly as rapid and impressive as the currencies themselves, and as such, thousands of solutions exist for a myriad of problems. When building the functionality and services of O2Protocol, it was crucial that we combined solutions to a number of pressing issues into a single turnkey platform that offers multiple benefits to users, avoiding the need for someone to be involved with, and monitor multiple products to meet these same ends.

The O2Protocol interface and all related services will always keep customer experience and ease of use as a priority. This white paper is intended for those seeking a more in depth look under the hood of what makes O2Protocol work and as such goes into more detail than the average customer may need. It is also assumed at this juncture that most people who will view this white paper have a solid base understanding of cryptocurrency and initial coin offerings (ICO) and as such the technical and historical background of those will be skipped.

System

A key aspect of O2Protocol is the system of finding creator and put the investor within their project and get a really profit. This system can be supported from the team, as a team we want to make people investing in projects that can really bring them benefits, and this can work within our experience and competence in this sector, we have many people working day by day on finding project of NFTs that can for real bring more to the world, we ARE NOT looking for project to flip and make profit as fast as possible.

The strenght of our team is rather a system that allows very safe, strong net returns, with miimum user oversight. Our team running different modes which are a combination of logic optimized for specific task, like finding project and analyze them and see if they can be really useful and generate profit.

Each mode contains a set of multiple strategies at its disposal and will automatically and autonomously switch to the most efficient strategy in reaction to market changes. The dynamic modes of the individual instances operate independently of each other with no cross communication. however, all performance is recorded in a central repository for continued analysis of all trading.

O2 Token

The coin created and offered by O2Protocol will be the O2 token, and will be an ERC20 protocol standard coin. ERC20 was chosen to ensure the upmost compatibility to form, and quickly execute partnerships with both exchanges, and other companies down the road as this project continues to seek out ways to offer value added features to its users and the community as a whole. It has been designed with 18 decimal places to comply with the encouraged but not compulsatory standard for ERC20 tokens.

The O2 token creation will be hard capped at 1 billion coins, this amount of coins reflects strategic calculations to support, first and foremost, the ideal scale of the trading platform where it performs optimally in respect to volume of managed assets. This ensures that the scale of managed capital always remains within the optimal ratio relative to overall market cap to continue producing quoted returns to users. The amount of tokens also included calculations to achieve the dispersal to what we consider an ideal sized user base, allowing for the coins to be traded at exchanges and kept in circulation with an initial value that would promote wide spread and adoption of the token. The low cost of entry along with the necessity of the coin to participate in the features of O2Protocol is intended to first drive large user base implementation while also maintaining initial and expanding demand for the token.

Who Can Benefit From O2Protocol?

1. Those seeking stable, high payout investments with minimal maintenance/residual revenue generation.

2. Those who want to combine the benefits of trading with the benefits of holding a coin that increase in value into a single product and also get NFTs as reward.

3. Those who want the benefits of a heavily diversified NFTs and cryptocurrency portfolio with the low maintenance of a single coin.

4. those who want protection from the current air of volatility surrounding crypto currency exchanges, the coins themselves and NFTs.

5. Those who want to invest in the blooming crypto market and NFT market, but do not have:

   a. Large investable capital: there are a number of issues preventing the entrance of investors with low initial capital from taking place in the market such as the $25k USD minimum often required to day trade, the $10k limit proposed for many crypto exchanges, up to the private

advisor whose clients must typically invest a minimum of $1MM.

b. Basic trading knowledge: while a majority of the population would like to earn additional income, they don't have a basic understanding of trading in general, and even fewer the particulars of the Cryptocurrency markets and NFTs market. Without at least a basic understanding, the odds are heavily against being able to earn profit or even break even.

c. Advanced trading knowledge: even with advanced TA, charting, and trading strategy training, the traditional success rate for those entering the field of day trading varies based on source, but is agreed to be under a 5% success rate.

d. Time to constantly monitor markets: unlike traditional commodities and assets, the cryptocurrency market and NFT market trades around the clock and around the globe.

e. A risk threshold for trading or even hodling: risk has always been a key determining factor in all investment and trading plans. The risk of trading any assets near top of the spectrum like cryptocurrencies and NFTs, even high to the point where buying and holding for a long period (hodling) poses risk above the threshold of many investors.

6. Those who do have advanced trading skills, time, and capital and wants to hedge their crypto investment portfolio with a low maintenance and safe assets.

7. Those who want to invest by hodling but wants to also add a steady earning revenue stream to their portfolio.

8. Those who want to maintain their privacy in investments.

9. Those who want to setup investments for the benefit of another, such as a first start investment for their children.

Airdrop

For every user that want to support the project before the start of the process of staking and the reward system, the team has created a special Airdrop.

Before the engagement of the artist the team has createda special collection that the user can find on Opensea.io, those collection its called "Cute Dragons V1".

Every user will be able to buy as many Cute Dragon they want, for every Cute Dragon that the user buy and hold till (data dell'airdrop), the user will get (numero di O2), we wanted to create that Airdrop for make sure that the users can instantly benefit of O2Protocol.

The O2s token recived through the Airdrop can be instantly put on staking and let the users start to get their rewards.

Utilizing Dex and O2s

All transaction into and out of the Dex system requires the use of O2s tokens exclusively, to maintain a number of beneficial features of the infrastructure. The first opportunity for people to own O2s will be by participating in the O2Protoco ICO. Following the completion of the ICO they will only be available via trading or exchanges in the near future. There are plans in the future to offer buying, selling, and trading directly via the user portal including support for fiat. There will initially be eight Cryptocurrency coins (outlined in the image below) accepted to purchase O2s. As it is a concern to many participants of the crypto space, mandating the use of O2s for all in and out operations, as well as support for accepting privacy centric coins in the ICO phase, enables those who are inclined to protect their anonymity provided they take the pertinent steps to do so.

Staking And Process

As we told up here, we want to make people have secure profit and with the lower risk they can have, for doing that we have created a system of staking where the users can put in staking their O2s tokens and get H2Os tokens as a reward.

These rewards will be used to give users the opportunity to receive NFTs for free, as a support for creator, and a safe method for the investor to dont lose their O2s tokens, an H2Os tokens will have the same value of an O2s tokens.

The users will be able to stake their O2s tokens directly through our website and will get H2Os tokens directly in their wallet, they will also have the opportunity to buy NFTs on our website.

There arent a minimum import to invest, every single user will have the certain to get a specific reward, based on what it has invested,we wanted to create this system to create the possibility for every single user to invest, without looking at his capital.

See You Soon

O2Protocol believes in the bright future of Crypto and NFTs as both a form of currency and a wide reaching technical industry and related services. We envision democratizing investments, allowing all levels of capital and experience access to reliable and impressive gains with easy to manage risk. Ease of setup, minimal to no maintenance, and clear reporting backed by top level security were all elements that we knew were necessary to make the lowest barrier to entrance and the highest level of adoption for the O2Protocol platform.
